

Papillon Club of America Health & Genetics

DO YOU OWN A PRA AFFECTED PAPILLON

-or do you know someone that does ?

If you do, Dr Simon Peterson-Jones and his research team need your help.

They cannot complete their goal of developing a breed specific test for PRA in Papillons without an adequate number of quality samples (blood). The more samples they have, the faster their research will progress. Papillon owners everywhere (in the world) are needed to submit samples so that this valuable PRA research can continue. (Papillon owners have not submitted any new blood samples since 2002)

WHAT DO THEY NEED ?

- DNA samples (blood is preferred) from affected dogs and their relatives, accompanied by complete pedigrees
- Reestablish communication from people that have previously submitted DNA samples from their dogs to obtain updates on any changes in vision status. All information will remain CONFIDENTIAL.

To obtain submission forms and blood sample kits,
please contact :

Dr. Simon Peterson-Jones
